

Functional QAD Training

Manufacturing Execution

End Game: The goal of the training is to take a deep dive into Production Execution functionality within QAD so attendees can understand all the relevant processes and transactions for both discrete Work Orders and Advanced Repetitive manufacturing and how they can be applied to different manufacturing environments. The training will touch on key process requirements that drive the discrete vs. repetitive decision and then how each is setup and transacted at the QAD program level. We will be reviewing transactions that impact inventory, labor, and exception processing such as scrap and rework. It is important to note that this training is focused purely on execution and will not address scheduling functionality such as that provided by MSW/PSW. The main topics covered are as follows:

- Product Structures
- Work Centers and Routings
- Work Order Processing
 - Work Order Release through Work Order Close
 - Monitoring Reports and Variance Analysis
- Advanced Repetitive Processing
 - Incremental Advanced Repetitive Setups
 - Repetitive Schedule through Backflush
 - Monitoring Reports and Variance Analysis

Tuesday—October 10th

1:30 pm – 2:00 pm: Product Structures

2:00 pm – 2:15 pm: BREAK

2:15 pm – 3:15 pm: Work Centers and Routings

3:15 pm – 4:15 pm: Work Order Processing

Wednesday—October 11th

8:00 am – 9:00 am: Work Order Processing (continued)

9:00 am – 10:00 am: Advanced Repetitive Incremental Setups

10:00 am – 10:15 am: BREAK

10:15 am – 12:00 pm: Advanced Repetitive Processing

12:00 pm – 12:30 pm: LUNCH

12:30 pm – 1:30 pm: Advanced Repetitive Processing (continued)

1:30 pm – 2:30 pm: Overflow / Question and Answer

2:30 pm: Training Session Complete
